

RETROFIT READY WEBINAR SERIES: NYCEEC PREDEVELOPMENT LOAN

This webinar series is geared at property owners of buildings that are 5000 to 25000 sq ft who face a variety of barriers to doing energy and water conservation work. We recognize that building decision makers are struggling with competing priorities such as their financial capacity and pending building repairs. These primary items of concern need to be addressed before pursuing energy projects. The path to retrofitting your building can also involve addressing these issues.
